# PASMA Low Level Access Course

## Course Syllabus

Who should attend this course:

Personnel who work from prefabricated units under 2.5m of height.

## Learning Objectives

How to safely assemble, dismantle and relocate low level access units without risk of personal injury to the delegate or others.

## Method

Instruction both in theory and practical sessions.

## Assessment

Closed book course with a pass mark of 80% in both the theory and practical.

## PPE

Suitable head / foot protection and gloves during the practical session (other protection as per site requirements).

## Course Content

Current Legislation, Regulations and Guidance affecting work at height with low level access units, PASMA Code of Practice, Publicly Available Specification, assembling, altering and dismantling low level units incorporating current best practice for fall protection, inspection of completed low level units and completion of Tower Inspection Records; hazards affecting the use of low level units.

## Venue Requirements

Training can be undertaken at our offices or at your site. However a suitable classroom to accommodate 12 delegates for the theory and practical sessions will be required.

## Supporting Documents

A course content and notes booklet and a current Code of Practice booklet will be issued to all delegates who attend the course.

## Award

A PASMA Certificate and PhotoCard will be issued to successful delegates who complete the Theory and Assessment, which has a five year validity period.

## Qualifications & Experience

No formal qualifications or experience are necessary, but it would be beneficial if delegates had a basic understanding of work at height issues.

## Literacy, Fitness & Health

Since the safe use of mobile access towers requires that delegates consult safety notices and read and thoroughly understand the manufacturer's instruction manual, literacy and language comprehension are important requirements for any tower user. Similarly, since the assembly and use of mobile access towers can be physically demanding, users should be physically fit and in good health and should, generally, not have problems with eyesight or hearing, heart disease, high blood pressure, epilepsy, fear of heights / vertigo, giddiness / difficulty with balance, impaired limb function, alcohol or drug dependence or psychiatric illness. If delegates have any problems with literacy or language comprehension, or have any doubts about their fitness to use mobile access towers, they must bring them to the attention of their employer. This need not preclude them from using mobile access towers, provided their employer conducts an assessment and is able to put into place adequate measures, to take account of any difficulties they may have.

## About PASMA.

Founded in 1974, the Prefabricated Access Suppliers' and Manufacturers' Association (PASMA), is the recognised focus and authority for mobile access towers. As such it advances safety, standards and best practice across a wide range of sectors and represents the interests of manufacturers.
